ansonbenny2312@gmail.com | +91 9633470233 | github.com/ansonbenny2313 | linkedin.com/in/ansonbenny

PROFESSIONAL SUMMARY

GATE-qualified (93.07 percentile) M.Tech Cyber Security postgraduate with hands-on expertise in AI/ML model development, behavioral anomaly detection, and Python-based secure application engineering. Dual-published researcher (Scopus + IEEE) with experience in transformer models, explainable AI, and forensic security frameworks. Eager to contribute to TCS's AI, GenAI, ML Engineering, and digital transformation initiatives.

EDUCATION

VIT Bhopal University 2025 – Present
M.Tech — Cyber Security and Digital Forensics Madhya Pradesh, India
• Coursework: Machine Learning, Network Security, SIEM & Incident Response, Cloud Security, Digital Forensics

Amal Jyothi College of Engineering 2019 – 2023
B.Tech — Computer Science and Engineering | CGPA: 8.2 / 10 Kanjirappally, Kerala

TECHNICAL SKILLS

Languages: Python, Java, C, C++, Bash (basic)
AI / ML: Scikit-learn, TensorFlow (basic), RoBERTa, One-Class SVM, Time-Series Analysis, SHAP, Pandas, NumPy, Matplotlib
Cybersecurity: Digital Forensics, Behavioral Anomaly Detection, SOC, SIEM, Threat Detection, Wireshark, Nmap, Kali Linux
Other: Cloud Security (CASB/CSPM/CNAPP), REST APIs, Git, MySQL, SQL

PROJECTS & RESEARCH

Forensic Framework for Detecting Covert Screen Recording in VoIP Sessions 2025 – Present
M.Tech Research Project (Ongoing) — Sextortion Prevention & Mobile Forensics
• Designing a device-level mobile forensic architecture using One-Class SVM and Time-Series Analysis to detect unauthorized screen recording in real time during VoIP calls — filling a critical gap network-level defenses cannot address.
• Monitors CPU, memory, battery discharge, and API hooks to model normal VoIP behavior and flag covert activity at the OS level without inspecting encrypted media payloads.

Improving & Explaining Phishing URL Detection with RoBERTa and XAI 2025
Accepted — Scopus-Indexed Journal (Indonesian Journal of Science and Technology)
• Built a high-accuracy phishing URL classifier using RoBERTa with full ML pipeline; integrated SHAP for transparent analyst-readable threat insights. Stack: Python, HuggingFace Transformers, SHAP, Pandas.

Suicidal Ideation Detection Web Application 2022 – 2023
Published — IEEE ICCPCT 2023
• Python ML web app classifying mental health risk from unstructured text; evaluated Scikit-learn classifiers on precision, recall, and F1. Peer-reviewed and published at IEEE ICCPCT 2023.

Adithi — Digital Visitor Management System, INS Vikrant 2022
• Flutter/Dart mobile app with role-based access control, MySQL integration, and identity audit logging for a naval vessel.

PUBLICATIONS

- Improving & Explaining Phishing URL Detection with RoBERTa and XAI — Indonesian Journal of Science and Technology (Scopus-Indexed), Forthcoming 2025
- Suicidal Ideation Prediction Using Machine Learning — IEEE ICCPCT, 2023

ACHIEVEMENTS & CERTIFICATIONS

- GATE 2024–25 — 93.07 Percentile in CS & IT (Top 7% nationally)
- Faculty Development Program — Security & Forensic Tools | ISEA Phase III, MNIT Jaipur | Sponsored by MeitY, Govt. of India

LEADERSHIP & VOLUNTEER EXPERIENCE

IEEE & TEDxAJCE — Design Lead & Office Bearer 2021 – 2023
NSS — Regional Coordinator & Volunteer Secretary 2020 – 2022
Jesus Youth, Pro-Life India — Full-time Volunteer 2023 – 2024
